None of the documents cited in the ISR discloses the inventions described in claims 1-57; therefore, these inventions appear to be novel and to involve an inventive step. In particular, none of the documents discloses the point of "searching for said reference image similar to said input image using the results of matching of input image with representative 3-dimensional object models and the results of matching of reference images with the same." Moreover, it would not be easy for a person skilled in the art to conceive of this point based on the documents.
